Section Number	Service	Fee - CY 2016	Fee - CY 2017	Authority /Year	LHMC Reference
----------------	---------	---------------	---------------	-----------------	----------------

The Director of Finance and the Director of Public Works shall jointly each year prior to September 1, compute the actual cost of water purchased or produced on an acre foot basis pursuant to the following formula:

1. Determine the price of water purchased and produced for the preceding fiscal year, by computing:
 - a. The cost of water purchased from Metropolitan Water District through Municipal Water District of Orange County.
 - b. The cost of water purchased from California Domestic company including commodity charges, stock assessments (on both owner and leased shares), water lease, expense over entitlement charges and all other costs.
 - c. The cost of ground water production including utility charges, depreciation on wells and equipment, financing costs, operational costs and all other costs of producing groundwater.
 - d. The sum of costs from items a,b and c divided by the total acre feet of water purchased and/or produced, to compute an average cost per acre foot of water.
2. The resultant cost of water, as determined above, as compared to a similar computation for the preceding fiscal year, before a commodity index.
3. The commodity index, as determined above, shall be applied to the commodity rate established in Section A, paragraph 3(a) (or as established by this formula for subsequent years) to establish a new commodity rate to become effective the next succeeding October 1.
4. The commodity index, as determined above, shall likewise be applied to the "water value" portion of the minimum monthly rate as established in Section A, paragraph 1 in the same manner, effective the next succeeding October 1.
5. Such rate modifications as may be calculated in 3 and 4 above shall be made to the nearest one cent (\$0.01).
6. The "Readiness to serve" portion of the minimum charge as established in Section 3 shall be modified effective each July 1st by a percentage equal to the percentage change in the Consumer Price Index the preceding May to the same period of the

----------------	---------	---------------	---------------	-----------------	----------------

prior year.

7. The City Manager shall file a report on the computations specified above with the City Council at a regular meeting prior to October 1st; the rates for water service thereby determined by said computations shall become effective on October 1st unless modified by the City Council.

8. The City Manager shall likewise concurrently file with the City Council a report including such other recommendations relative to recovering costs of service as he deems necessary. Said report shall include estimates of necessary adjustments in water rate schedules (as reported in paragraph 7 above) to achieve an excess of revenues over expenses equal to 8.7% of the City's equity in the Utility Authority (as established on the prior June 30th) and giving consideration to reinvestment in the water system equal to 2 1/2% of estimated total replacement cost. Said report shall likewise take into consideration interim adjustments made pursuant to Section 6.

(D)

Notice of Price Increases:

At such times as the City receives notice of price increases in the purchase of water (such as from MWD, MWDOC and/or Cal Domestic Water Company), the City Manager shall estimate the additional cost to the Utility Authority of such price increases and the necessary adjustment in the commodity rate charged by the Utility Authority to customers to recover such price increases and shall report such findings to the City Council at the earliest possible date. Such findings shall be effective in adjusting the commodity rate established by this fee schedule (and modified from time to time as required and/or authorized by this fee schedule) on the first day of the month following filing of such report with the City Council unless modified by the City Council.
